Summary

The first official weather forecast in US history was delivered by the efforts of Increase Lapham and his colleagues at Milwaukee on November 8, 1870. At the time, Lapham was in Chicago working for what became the National Weather Service. The report concerned weather conditions on the Great Lakes as they pertained to Great Lakes shipping. This report marked the beginning of the National Weather Service and is thus significant for the history of American meteorology. This event occurred in the context of the massive post-Civil War economic boom, which led to the industrialization of the United States, a great increase in population, immigration, commerce, the specialization and professionalization of many scientific fields, the founding and funding of many American universities, and the emergence of an urban, college-trained professional class. In the same period, the various federal “homestead” acts and the agricultural bent of the new “land-grant” universities sought to transform as many Americans as possible into farmers and to apply scientific professionalism to farming. Some citizens embraced the new professionalism and science, hailing it as progress and viewing it with boundless optimism, while others resisted.

Milwaukee began as a Native American village, called *Minowaki* (“Good Land” or “Good Country” in Ojibwe because of its rich soil and because the climate near the Lake Michigan offered more frost-free days for the Indigenous people to grow corn and other crops. Starting in the 1780s, Milwaukee became a fur-trade community dominated by the Métis, a people of mixed European and Indigenous heritage, and then an American settlement from the mid-1830s onward. By 1870 many Indigenous people remained in Milwaukee, many having returned despite being forcibly subjected to earlier processes of “removal” by the U.S. government. Many were allowed to remain on their lands, particularly if they were Christian and of mixed ancestry. A small free black population established itself, helped along by strong anti-slavery attitudes among Milwaukee’s elite, many of whom were Yankee-Yorkers. Farm women and other American women began to agitate for greater opportunities inside and outside the home, and Wisconsin experienced economic fluctuations as the state shifted from producing grain to producing dairy.

The “Storm Signal Station,” as it was called in 1870, was an attempt to use a new technology to deal with an old problem, the frequency of November Great Lakes storms. The immediate impulse for its creation was the terrible storms of November 1869, in which a record number of ships and their cargoes were lost.

Newspaper Coverage

Reading newspaper coverage of events as they occurred is an excellent way to get a view of how contemporaries understood them. These articles were accessed through the database called [Nineteenth Century U.S. Newspapers](#), available through the UWM Libraries.

To search for the relevant newspaper articles, first go to the UWM Libraries webpage and log in to your library account with your regular UWM credentials. Then go to "Databases A-Z" and search for "newspaper." In the results you should see "Nineteenth Century US Newspapers." Click on it. Once you get to it, do an advanced search under the main search bar. I did a search for "Lapham," "Storm Signal," and "Storm Signal Station." You can also search for Mitchell to track down the citations for Alexander Mitchell. The weather report was referred to as a storm signal report in the original newspapers; it is important to do a search on original terminology to find what you need. You can specify a date range in the search. I did 1860-1870, and you can specify what publications you want to search. I checked the boxes for all of the publications in the database from Milwaukee and Wisconsin.

In addition to these newspaper articles, you might find it useful to peruse the file of Weather Bureau clippings, in the Increase Lapham papers, at <https://content.wisconsinhistory.org/digital/collection/p15932coll7/id/21710/rec/4>.

Increase Lapham

Increase Allen Lapham is often touted as Milwaukee's first scientist and an early chronicler of Wisconsin. Many landmarks in Milwaukee and southern Wisconsin are named for him. Born in upstate New York into a Puritan English family (his ancestors and siblings had now unfamiliar names like Seneca and Pazzi), he made his way west working in the family business of canal engineering. With the help of Byron Kilbourn, Lapham decided to make Milwaukee his permanent home and became a naturalist there.

Lapham, responsible for the inauguration of the National Weather Service at Milwaukee, the founding of Milwaukee-Downer College, and the Wisconsin Historical Society, as well as many other institutions, seems to have had two contradictory impulses in his character. He was an ardent conservationist, opening the way for later Wisconsin naturalists like Aldo Leopold and John Muir. He advocated for the conservation of Indian mounds and Wisconsin forests. Yet at the same time, he must have known that his reports and information would contribute to the settlement and development of the state and the capitalist exploitation of its natural resources.

Focus on the introduction and chapter 1 for mentions of Lapham. You might also read Chapter 2 if you are interested in the history of women's college education. Catherine Beecher, one of the founders of Milwaukee-Downer college, believed firmly in "separate spheres" for men and women: if women could be fitted for their sphere through higher education to be nurses, teachers, social workers, etc. they could be the moral guardians of men, better wives and mothers, and the preservers of national unity and American democracy. Increase Lapham, one of the contributors to Milwaukee-Downer College, believed differently: that the curricula in a women's college should be the same as in men's colleges, because men and women should be equal and intellectual equality would produce more compatible marriages, drawing on the example of his own marriage to Ann.

Olmsted, James D. "Increase Lapham and the Roots of Environmentalism in Wisconsin." MA thesis, University of Wisconsin-Milwaukee, 1996.

Newspaper articles

"Dr. Lapham." *Milwaukee Daily Sentinel*, 17 May 1875, p. 8. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3001909517/NCNP?u=milwaukee&sid=NCNP&xid=262791b9>.

A tribute to Lapham from E.D. Holton, wherein Holton also discusses the formation of the “signal service” and (humorously) mentions that Lapham was shorter than he.

“Legislative.” *Milwaukee Sentinel*, 29 Dec. 1840. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3013900492/NCNP?u=milwaukee&sid=NCNP&xid=0436180a>.

“Legislative” discusses Byron Kilbourn’s approval of a loan for the building of a canal in Milwaukee and mentions that he wrote a letter to Milwaukee for that purpose, while working in Sandusky, Ohio.

“Milwaukee Lyceum.” *Milwaukee Sentinel*, 12 Jan. 1841. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3013902139/NCNP?u=milwaukee&sid=NCNP&xid=56b3a378>.

Lapham and the Milwaukee Lyceum begin unofficial “weather reports.”

Lapham, I. A. “Territorial.” *Milwaukee Sentinel*, February 3, 1844. Nineteenth Century U.S. Newspapers. <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3003248050/NCNP?u=milwaukee&sid=NCNP&xid=9210d2d9>.

A letter to the paper from Lapham about his early canal work.

“Water Works.” *Milwaukee Daily Sentinel*, August 4, 1870. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3009109189/NCNP?u=milwaukee&sid=NCNP&xid=29e12e0f>.

Lapham’s opinion about whether lakes outside the city of Milwaukee, in the immediate vicinity, could furnish a water supply for the city. His answer is mostly a no.

“Milwaukee Female College.” *Milwaukee Daily Sentinel*, 18 Feb. 1870. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3009110874/NCNP?u=milwaukee&sid=NCNP&xid=b385af3f>.

Lapham mentioned as a trustee of “Milwaukee Female College” (later Milwaukee-Downer College).

“Wisconsin Academy of Sciences, Arts and Letters: A Brilliant Beginning” *Milwaukee Daily Sentinel*, 26 July 1870. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3009110874/NCNP?u=milwaukee&sid=NCNP&xid=b385af3f>.

com.ezproxy.lib.uwm.edu/apps/doc/GT3009707414/NCNP?u=milwaukee&sid=NCNP&xid=a63ee1b6.

Notes on the first meeting of this Academy at Milwaukee. Lapham discusses Lake Michigan fish and the geology of Devil's Lake.

"Abstract of Meteorological Observations Mad [sic] at Milwaukee for April 1849, by I. A. Lapham." *Milwaukee Daily Sentinel*, May 3, 1849. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3001832492/NCNP?u=milwaukee&sid=NCNP&xid=159dd540>.

"Mr. Laphams [sic] Lecture." *Milwaukee Daily Sentinel*, 15 Feb. 1848. Nineteenth Century U.S. Newspapers, <https://link-gale-com.ezproxy.lib.uwm.edu/apps/doc/GT3002853661/NCNP?u=milwaukee&sid=NCNP&xid=bb1498fa>.

Wisconsin geology, with an emphasis on Dodge County.

"Protection for the Families of Drunkards." *Milwaukee Daily Sentinel*, February 26, 1869. Nineteenth Century U.S. Newspapers, <https://go-gale-com.ezproxy.lib.uwm.edu/ps/i.do?p=NCNP&u=milwaukee&id=GALE|GT3002091003&v=2.1&it=r&sid=NCNP&asid=89a4f652>.

Authored by Lapham: argues for the right of women married to "drunkards" to administer the husband's estate and sue for loss of income.

Julia Lapham

Julia Lapham, Increase Lapham's daughter, was an active member of the Wisconsin Historical Society and Waukesha County Historical Society, the Wisconsin Archaeological Society, and the president of the Wisconsin Federation of Women's Clubs. She lived in Oconomowoc and never married, dying of heart disease there on January 2, 1921. Like her father, she maintained an interest in the preservation of Indian mounds and purchased Indian artifacts to preserve them. But Julia Lapham was ambivalent about actual Indian people, having lived through the Dakota War of 1862 on her aunt's Minnesota farm, an experience she recounted for the *Wisconsin Magazine of History*, which also published her obituary. She maintained a correspondence with noted Wisconsin Dells photographer H.H. Bennett and had an interest in the early history and mission work of the Protestant and Anglican Churches in England and America. She is remembered in Oconomowoc as a person who made notable contributions to that town. She was a founder of the Oconomowoc Public Library and served as its second librarian. She preserved much of Oconomowoc's history and was notably the first person in Oconomowoc to receive a telephone call.

Julia is mentioned on page 83 as having met Bennett through her women's club work, advocating for the Dells and Devil's Lake to be preserved as parks.

Cleveland Abbé:

Involved in the first official US weather report, Cleveland Abbe is considered a founding member of the National Weather Bureau and one of the nation's first weathermen. Like Lapham and many others involved in the 1870 weather report, Abbe was a Yankee-Yorker who went west. Born in New York City, he graduated from the City College of New York with a Bachelor of Arts and an M.A. in 1860. He attempted to join the Union Army when he was 22 but failed a vision test due to his eye problems and was kept out of war. Therefore, he then studied astronomy at Harvard University and also in Russia, graduating in 1864 with a Bachelor of Science, and became the director of the Cincinnati Observatory in 1868. His first weather bulletin in Cincinnati was issued on September 1, 1869.

In the primary source section, note that Abbe wrote much more than is provided here. This partial list is meant to help you get a sense of his writing during the period under study in this course.

This interesting monograph discusses how America's nineteenth century economic boom, territorial expansion and population growth, particularly in the post-Civil War years, led to the professionalization of science, its specialization, and its domination by college-educated, research-oriented men. The same economic boom also led to the proliferation of American universities more generally, vast amounts of cash being poured into existing universities and new ones founded, and a climate where new programs in science, technology and engineering at nineteenth-century American universities challenged a previous academic emphasis on the humanities and Greco-Roman "classics." For our purposes, students will want to read "Part Four: War and Reconstruction, 1861-1876", pages 269-362 (chapters 20-26), although if they really want to be briefer and narrower their focus they should focus on chapters 23-26 (pp. 313-362) only.

Craft, E. "Private Weather Organizations and the Founding of the United States Weather Bureau." *The Journal of Economic History*, 59 (4) (1999): 1063-1071.

Craft, Erik D. "The Value of Weather Information Services for Nineteenth-Century Great Lakes Shipping." *The American Economic Review* 88, no. 5 (1998): 1059-076.

The United States government set up a weather reporting service in 1870; this article uses changes in Great Lakes shipping losses to measure its effectiveness. Almost half of the weather stations on Great Lakes closed in fall of 1883 because of appropriations reductions, permitting estimate of value of the reports. "The results indicate that the social rate of return for weather expenditures during the Weather Bureau's founding period was at least 60 percent."

Fleming, James Rodger. *Meteorology in America, 1800-1870*. Baltimore and London: The Johns Hopkins University Press, 1990.

Available at UWM Libraries Stacks

Description excerpted from Google Books Abstract: Challenging the widely held assumption that meteorologists were mere “data-gatherers” and that U.S. scientists were inferior to their European counterparts, James Rodger Fleming shows how the 1840s debate over the nature and causes of storms led to a “meteorological crusade” that would transform both theory and practice. Centrally located administrators organized hundreds of widely dispersed volunteer and military observers into systematic projects that covered the entire nation. Theorists then used these systems to “observe” weather patterns over large areas, making possible for the first time the compilation of accurate weather charts and maps.

When in 1870 Congress created a federal storm-warning service under the U.S. Army Signal Office, the era of amateur scientists, volunteer observers, and ad hoc organizations came to an end. But the gains had been significant, including advances in natural history and medical geography, and in understanding the general circulation of the earth’s atmosphere.

See especially pages 142-43, 146, 152-53, 156, 161-62.

Farmer

In 1870, the new scientific professionalism, championed by the US government, sought to establish itself in agricultural land-grant colleges, reform the practice of farming, and make as many Americans farmers as possible through “homestead acts.” Some farmers embraced the new professionalism while others demurred. In 1870 Wisconsin was still a world leader in wheat production, though other farmers would soon advocate for a switch to dairy. Hard-line dairy advocates, mainly Yankee-Yorkers, often framed the promotion of Wisconsin dairy in quasi-religious terms: they believed that caring for livestock taught farmers patience and required good moral fiber, unlike wheat cultivation, which they saw as inherently nefarious for its promotion of get-rich-quick schemes, soil exhaustion, and the somewhat morbid fact that high wheat prices in 19th-century America were usually the result of agricultural disasters in other parts of the world. Male farmers in 1870 fought for social and political reforms that would improve their economic conditions; female farmers fought equally hard for access to education, culture and self-improvement and a more equal partnership with their husbands.

You'll want to focus on Chapters 5 and 6 as they discuss the wheat-dairy switch, as well as the production of hops and barley for brewing, attempts to begin sheep grazing, and the feeding of dairy cows with silage for consistent milk production, which was an innovation not yet adopted in 1870.

Bloomberg, Kristin Mapel. "Women and Rural Social Reform in the 1870s and 1880s: Clara Bewick Colby's *Farmers' Wives*." *Agricultural History* 89, no. 3 (2015): 402-25.

Early Midwestern feminists in the 1870s and 1880s argued for educational and moral reform to improve the lot of the hard-working farmwife and the 20,000 American women at the time who owned their own farms.

Child, Brenda J. *My Grandfather's Knocking Sticks: Ojibwe Family Life and Labor on the Reservation*. Minneapolis: Minnesota Historical Society, 2014.

Child's discussion of wild rice and maple sugar harvesting describes wild rice and maple sugaring as historically a woman's activity and US federal attempts to revive what she calls the "seasonal round" as male labor in the 1920s and 1930s. Child's discussion of the re-gendering of wild rice gathering as male is significant: farming and fathering were women's work to Native tribes and many of the "civilization" attempts that began in the

1870s were an attempt to get Native men to farm and to get Native women to stop farming.

Edwards, Richard. "African Americans and the Southern Homestead Act." *Great Plains Quarterly* 39, no. 2 (2019): 103-129, [doi:10.1353/gpq.2019.0018](https://doi.org/10.1353/gpq.2019.0018).

Online Access through UWM

Discusses how black Americans' exclusion from the post-Civil-War Homestead Act motivated their migration west to the Great Plains. The fact of their exclusion (due to local white opposition) and their subsequent inability to acquire southern farmland could equally apply to black Milwaukee migrants of the same era.

Edwards, Richard. "To Commute or Not Commute, the Homesteader's Dilemma." *Great Plains Quarterly* 38, no. 2 (2018): 129-150, [doi:10.1353/gpq.2018.0021](https://doi.org/10.1353/gpq.2018.0021).

Discusses the Homestead Act and whether "commuting" one's claim—that is, buying the free land outright for someone else to work or manage it—was fraudulent.

Farmers who raised grain in Iowa and Wisconsin, navigated the Milwaukee grain trade, and suffered from low grain prices supported the reform agenda of the Greenbackers/Grange movement; more prosperous dairy farmers did not.

Schafer, Joseph. *A History of Agriculture in Wisconsin*, Vol. 2. Madison: Wisconsin Historical Society, 1922.

Access for free on Google Books. Also at UWM Libraries AGS Library, General Stacks and Archives.

You'll want to focus on chapters 5, 6, and 7. Chapters 5 and 6 detail the wheat bust and the switch to diversified agriculture. Experiments with raising wool sheep and hops were

winding down by 1870 due to low prices for hops and wool, but in 1870 pork-raising was growing in popularity and saved many former wheat farmers from bankruptcy and land loss. This was enhanced by a growth in livestock raising more generally, and a hybridization of local livestock with new “improved breeds” from Europe and the eastern states.

Ezekiel Gillespie

Ezekiel Gillespie was one of nineteenth-century Milwaukee's most famous black residents. As a railroad porter, Gillespie would have been concerned about weather conditions for his work on the railways. As the founder of Milwaukee's first black church (St. Mark's African Methodist Episcopal), he might have been concerned about weather conditions for church services and events affecting his congregation and community. He acquired early prosperity through his business as a grocer. Gillespie, a biracial man from Tennessee who was his enslaver's son, was also Wisconsin's and Milwaukee's first registered black voter. Hatred for slavery among Milwaukeeans, fanned by its notoriously abolitionist Yankee-Yorker elite, had encouraged black migrants to form a small community there by 1870. Gillespie's descendants dispersed throughout the Midwest and to the West Coast, many of them taking up prominent social roles in the black community like he had, while others "passed" for white and chose to live as white persons.

Grain Trader

Chicago Board of Trade or Milwaukee Grain Exchange

In 1870, Wisconsin was a world supplier of wheat. The Milwaukee Grain Exchange and Milwaukee's shipping on the Great Lakes grew as a result of the wheat boom, as did the Chicago Board of Trade, which began as a grain exchange. Farming reformers of Yankee-Yorker origin, who advocated for dairy farming and other diversified crops instead of wheat, thought that the state was over-reliant on wheat, which they viewed as leading to economic instability, soil exhaustion, and poverty among farm families. Still, wheat remained a major crop and article of grain in the 1870s—in some years the volume and total worth of Milwaukee's grain exports exceeded those of Chicago. The profitability of wheat and other grain often hampered agricultural diversification in Wisconsin and led to a get-rich-quick mentality among novice wheat farmers that contributed to the volatility of wheat prices. Overseas markets, particularly Great Britain and the Europeans ravaged by the Franco-Prussian War, used American grain, including Wisconsin wheat, to avert famine throughout the 1870s.

Rothstein, Morton. "American Wheat and the British Market, 1860-1905." Ph.D. diss., Cornell University, 1960.

Online Access through UWM Libraries, see especially chapters 2, 3, 5, and 6

Rothstein emphasizes the role of railroads and water transport in making Milwaukee, Chicago, and other Midwestern cities hubs of the wheat trade in the USA; the invention of the grain elevator; the exportation of wheat from the Great Lakes region to New York to be shipped abroad via the Erie Canal; Chicago Board of Trade's beginning as an association of grain merchants, etc.; and the development of "futures" trading in the Great Lakes trade, facilitated by the use of grain elevators and their receipts. The early part of Chapter Five focuses on the English grain trade: England was importing about half (48 percent) of the wheat needed for its consumption by the 1870s, and most of that was supplied by the U.S.A., which played a primary role in the Wisconsin "wheat bust" and the switch to dairy; England took a half to two-thirds of all American wheat exports from 1870-1914; the dependence of all of 19th-century Europe on American grain imports due to bad harvests in Europe from 1879-1881. Chapter 6 especially concentrates on the development of Midwestern wheat-growing. Illinois grain merchants and the Granger movement.

Read for free online through HathiTrust, though not available for download.

Students will want to read chapter 6 (VI), which covers the years 1866-1871. It begins on page 339 in the book, which is listed also as 353 in the digital scan.

Great Lakes Captain, Deckhand, and/or Widow

After the Civil War, there was a vast increase in the volume of Great Lakes shipping, the number of sailing vessels on the Lakes at any given time, and technological innovations in the design of Great Lakes ships. This increased the frequency, intensity, and financial and human losses from Great Lakes shipwrecks. Sailors of all races noted that November was the worst month for storms and shipwrecks and called it the “curse of the 11th month.” But the captains and financiers of ships ignored this “curse,” either out of overconfidence or for financial reasons. What motivated the weather service to form was a particularly bad storm in November of 1869, which led to record loss of cargoes and men and scenes of devastation all around the Lakes. Captains had a mixed reaction to the weather service: many of them supported the weather service and followed its warnings, and many did not, preferring to trust omens, signs, folklore and their own intuition. This character could be a ship’s captain, a deckhand, or a widow of a deckhand or captain from the ‘69 storm, either for or against the Signal Service.

A good general history, a bit technical in describing types of ships and their construction.

Other resources

Milwaukee Public Library's Great Lakes Marine Collection:

This collection prominently features records of vessels that sailed the Great Lakes, plus magazines, journals and directories pertaining to Great Lakes ships, subject files on Great Lakes maritime history, nautical charts, log books, and historical photos of Milwaukee waterways.

See details at https://mpl.org/special_collections/great_lakes_marine_collection.php.

Wisconsin Maritime Museum in Manitowoc:

Over 85,000 artifacts, photographs, works of art and documents pertaining to Wisconsin and Great Lakes maritime history from the earliest historical times to the present. This collection is also an "official repository" for Great Lakes shipwreck artifacts.

See details at <https://www.wisconsinmaritime.org/>.

Byron Kilbourn

Another controversial figure who contributed much to Milwaukee's development, particularly its canals, roads, harbor and railroads, Kilbourn was noted for his bombastic and often difficult personality, but was a close personal friend of Increase Lapham, whose career grew in tandem with his own. Born in Connecticut as another westering Yankee-Yorker, he began his career as a canal man, surveyor, and land speculator in Ohio before settling in Milwaukee. He was a key force behind the funding and construction of Milwaukee's transportation. He was the founder of Kilbourn City (renamed Wisconsin Dells in the 1930s), and Milwaukee's Kilbourntown neighborhood.

Alexander Mitchell

A native of Scotland, a lawyer and a businessman, Mitchell established Milwaukee's first reliable bank when he settled there, along with a cadre of other Scots, and evidently showed "good Scotch sense" in marrying another prominent Milwaukee family's daughter, who was of Vermont Yankee stock. Mitchell also played a role in bringing railways to Milwaukee, ran for Congress in 1870, serving in Congress for a number of years, and preached against banks who used paper money, which he disliked. Mitchell seems to have provoked extreme positive or negative reactions: fans saw him as a civic father to Milwaukee who contributed to its development, while detractors saw him as a self-interested businessman who was little better than a crook. Mitchell also seems to have brought his siblings and other relatives to Milwaukee from Scotland in a chain migration and gotten them jobs or postings: an early "Godfather" of the city? No negative press appears to have attached itself to these Scottish immigrants, aside from the personal attacks on Mitchell; commentators rather laud the stereotypical Scottish traits in Mitchell they do mention: Scots were well-educated, English-speaking Protestants who were canny with money and business, but also had a reputation (evident in the smears on Mitchell) for being tight-fisted, stingy, greedy, selfish, grasping and clannish.

Anti-Mitchell

“THE voters of this Congressional district will do well to remember that it is not altogether a question of merit between Judge Lyon and Mr. Mitchell, that they are called upon to decide at the ballot-box, although that ought to influence then in Lyon’s favor, but that the administration of President Grant is involved in the contest, and a decision against Colonel Lyon must be regarded also as a verdict against General Grant.” *Milwaukee Daily Sentinel*, 17 Oct. 1870.

Albert Myer

Myer was the head of the US Army Signal Corps, present at the first forecast. Myer was also a Yankee-Yorker, born in Newburgh, New York and raised in Buffalo. He received his MD degree from Buffalo Medical College in 1851 and became a US Army surgeon in 1854. He invented a system of long-distance telegraphic codes known as wig-wag signaling, used by both sides in the Civil War. He also served in the Navajo campaign in New Mexico. Myer became the chief signal officer of the new Signal Corps in March 1863. He was removed from that post in November 1863 due to professional rivalry and personal animus with Secretary of War Edwin M. Stanton. In 1866, Myer was reinstated and the Signal Corps reorganized. In 1868 he attained the rank of brigadier general, and in 1870, the US Congress officially assigned Myer and the Signal Corps the duty of making "meteorological observations" by telegraph. In November 1870, Myer had been the official head of the Signal Corps since August of 1867.

Chapters 1 and 2 discuss Myer.

Native American

The tribes anciently indigenous to Milwaukee are the Three Fires Confederacy (Ojibwe, Odawa/Ottawa, and Potawatomi, collectively called the *Anishinaabeg*), as well as the Menominee and some Ho-Chunk. Milwaukee was said to be a kind of dividing point between Potawatomi and Menominee lands. In Milwaukee there are also the relocated eastern tribes such as the Stockbridge-Munsee, Brothertown, and Oneida, who, like the Yankee-Yorkers, hail from the east coast. By 1870, many of them have already been subjected to “removal”, a US government policy which either brought them to Milwaukee (in the case of the eastern tribes) or forced them out until they returned later under President Andrew Jackson’s policies of the 1830s, in which tribes east of the Mississippi were moved west on forced, brutal journeys. In 1838, Milwaukee area Indians experienced their own “Trail of Death” when US soldiers forced them to gather at the “Indian Fields” near the present-day Forest Home Cemetery and marched them to Kansas and Iowa. Many returned or evaded the order to move. Native Americans have their own traditions about the weather, the Great Lakes, and storms, many of which revolve around the reasons for the storms and the presence of monsters (water panthers or serpents) in the lakes.

Wilson, Gilbert Livingstone and Buffalo Bird Woman (Wahheenee). *Buffalo Bird Woman's Garden: Agriculture of the Hidatsa Indians*. St. Paul: Minnesota Historical Society, 1987.

Available through UWM System request

This is a reprint of the 1917 edition. Buffalo Bird Woman was born around 1839 in present-day North Dakota and, by the time she recounted her stories to Wilson, had been displaced with the rest of her people onto the Fort Berthold reservation. But she maintained her customary agricultural practices, which she recounts here. She lived to be nearly 100 years of age. The Hidatsa are a Great Plains tribe, so their farming methods would not have been exactly alike to the Great Lakes people, but like other Hidatsa and Native women across the Midwest, Buffalo Bird Woman took pride in her farming duties.

Civil War Veteran at Soldier's Home

In 1870 the Soldier's Home would have been newly established, since it was founded in 1867. Prominent families like the Laphams contributed to its establishment. Many Civil War veterans would have been living there, maybe one who looks forward to the forecast because of his weather-related aches and pains. Soldiers at the home were sold beer, and many came home from the war with addictive habits like morphine. In the 1870s a chapel was built on the grounds of the Home.

Primary Sources

There are nineteen pictures of the Soldier's Home from the early 1900s in the "Greetings from Milwaukee" online postcard image collection: <https://uwm.edu/lib-collections/greetings-from-milwaukee/>

"Concerning Women." *Women's Journal*, 1898.

Access online, <https://go-gale-com.ezproxy.lib.uwm.edu/ps/i.do?p=NCCO&u=milwaukee&id=GALE|PNVPOA317165075&v=2.1&it=r&sid=NCCO&asid=c452ed32>

Mentions a Mrs. Lydia Ely as a major fundraiser for the Soldier's Home in 1865 and a more recent (1890s) Civil War monument in the city.

Available through UWM libraries online.

Lutie Eugenia Stearns, a "Yankee-Yorker" to her marrow, born in Massachusetts of English-Puritan ancestry, became a pioneering Wisconsin librarian whose traveling book service was the precursor to the widespread establishment of public libraries throughout the state, which she advocated for. She tells of her family's move from Massachusetts to Milwaukee in the 1870s. Her father worked for the Soldiers' Home and she recounts a childhood near the Soldiers' Home that was equal parts pleasant and harrowing.

"The Consistency of Our Government Officials Is Shown in the Fact That Men Are Expelled from the Soldier's Home near Milwaukee Who Get Drunk, Yet \$30,000 of Beer Is Allowed to Be Sold Annually to the Inmates of the Home." *Woman's Voice and Public School Champion*, 1891.

A link from the successful project to save the soldiers’ home and use it for modern, revamped veteran housing.

Telegrapher

The success of the weather forecasting system depended on telegraphers, who delivered information about weather conditions and sent out the forecasts. This character will touch on state of science and technology in the nineteenth century, the urbanization of America, and the development of the urban workforce. Post-Civil-War growth in American population and immigration also heralded mass urbanization, industrialization and the rise of major cities. The telegraph and the telephone were invented in this period and brought about an era of mass communication. The ease of communication by telegraph and the cosmopolitan origins of its engineers spurred hopes that telegraphy would create a more peaceful world. Telegraphy has been called the “Victorian Internet” by one historian: the comparison is apt, as many fiber-optic routes for Internet access were built on or near the sites of former telegraph cables.

Weather Prophet

Amidst the growing professionalization and specialization of science, the rise of the university, and the growth of a college-educated class of scientists who did full-time scientific work in the post-Civil-War years, “weather prophets” stood on the losing side of all these trends. Amateur weather prophets, who were not educated as professional scientists and who relied on symbolism and folklore to make weather predictions, often resented the professionalization of weather forecasting as a loss to their business and prestige. Many of them made quite a good living at weather forecasts and resented the scientific incursion as a loss of income. Some of them also did astrological forecasts and combined astrology with the weather, though the astrology was never as reputable in polite circles as the weather predictions, and astrological predictions were often published by weather prophets under aliases.
