Abstract
This monograph reviews current literature published since 1986 about people with dementia, therapeutic goals for this population, and the social, organizational and physical environments in which they live. This volume is a continuation of annotations of literature published prior to 1989 which follows the same conceptual framework.

Preface and Acknowledgments

This monograph is the second volume of Environments for People with Dementia: Annotated Bibliography. The First Bibliography was published in 1989. This volume covers literature which appeared between 1986 and 1993, with concentration on items published between 1988 and 1993. The first bibliography was one of several publications developed through the course of a research and development project titled Environments for People With Dementia.

The project was directed toward the development of guidelines for environmental design responsive to the needs of people with dementia and their care-givers. To meet this goal, a wide range of needs, behaviors, and user groups were considered. Similarly, a continuum of living arrangements — from independent residential settings to institutions — were examined.

The overall project was organized into four primary phases and related products:

(1) an annotated bibliography;
(2) case study analyses;
(3) regulatory analyses;
(4) design guide.

These four reports were published in 1989 by the American Institute of Architects/Association of Collegiate Schools of Architecture, (AIA/ACSA) Health Facilities Research Program, Washington D.C.

The first volume presented the results of the initial phase — An annotated bibliography focused on the literature about people with dementia, therapeutic goals for this population, and the social, organizational and physical environments in which they live.

This second volume follows the same conceptual organization as the first volume. This volume was developed by members of the Institute on Aging and Environments, supported by a grant from the Helen Daniels-Bader Charitable trusts.
