

# ACKNOWLEDGEMENTS

There were many other assessments and design recommendations from students on the vast range of campus public places. What we cover in this booklet only scratches the surface. However, systematic evaluations of the campus have led here to more insightful re-thinking of the nature of our public places. Our intent is to encourage administrators and others on the UWM campus and in the UWM community to seriously and creatively consider the potential, and importance, of the physical environment in enhancing all dimensions of educational experience.

The students of ARCH 302 class of Fall 1999 who participated in this work include:
